EDUCATION

Nanjing University of Information Science & Technology

June 2025

Computer Science and Technology

EXPERIENCE

Independent Full-Stack Developer

Nov 2025 – Present

Contract delivery · Remote and on-site collaboration

GINOCN Cross-Border E-commerce Website · AI + WordPress Automation

ginocn.com

- Built and customized the WordPress site, using AI-assisted development to create plugins that automate selected business workflows
- Designed a vision-model page-recreation pipeline that analyzes a reference site's structure and styles, iterates prompts and frontend code, then routes output through manual validation
- Configured GitHub CI/CD to build, test, and deploy on push; standardized reusable components and deployment steps for repeatable multi-site delivery

Smart Elderly Care Service Platform · Project Lead

Apr 2026 – Present

- Lead delivery of an offline operations display for a district retirement facility, integrating 10+ IoT device types through Node-RED, HTTP, Netty TCP, and Kafka across C++ and Spring Boot services
- Package the isolated Windows-server deployment with Docker Compose and migrate operational data from MySQL to Dameng

College Vehicle Dispatch System · Frontend Developer

Nov 2025 – Jan 2026

- Delivered the React frontend for 10+ operational modules and 39 feature points, including an ECharts and Canvas driving cockpit, RBAC, vehicle dispatch and approval, maintenance, and third-party data integrations

SELECTED PROJECTS

AgentOps Desk

Live · Source

- Built a Python, Starlette, and SQLite MCP gateway with 4 discovery and execution meta-tools, keeping large tool catalogs out of agent context
- Implemented scoped API keys, per-tool and per-account rate limits, expiry and IP controls, policy-aware errors, human review, and complete audit records

FleetLens MCP Analytics

Live · Source

- Built a TypeScript MCP server and React renderer that convert operating data into governed datasets and responsive dashboards with filters, multiple chart types, and presentation controls
- Published shareable views and a credential-free seeded demo that reproduces the complete question-to-dashboard workflow

Discord Full-Campus Real-Time Platform

Graduation Project

- Built a Next.js 15 platform with Socket.io messaging and polling fallback, LiveKit one-to-one and group calls, Prisma and MySQL data, paginated queries, file attachments, and Clerk authentication

Additional delivery English-vocabulary WeChat mini program, Python and Scrapy crawler, and Unity mini-games

TECHNICAL SKILLS

Languages TypeScript, JavaScript, Python, Java, C++

Web & Data React, Next.js, WordPress, Node.js, Express, Spring Boot, REST APIs, Socket.io, Prisma, MySQL, SQLite, ECharts, Canvas

AI & Platform MCP, agent workflows, vision-model workflows, human review, RBAC, Git, GitHub CI/CD, Docker, Linux

Spoken Mandarin Chinese (native), English (CET-4)
