

Full-stack engineer with independently delivered client systems spanning operational dashboards, IoT integrations, real-time communication, and AI-agent operations. Comfortable owning ambiguous work from requirements and architecture through implementation, deployment, debugging, and handoff. Uses AI coding agents as an engineering tool while keeping human review, access controls, and verifiable execution in the loop.

CORE SKILLS

Languages

TypeScript, JavaScript, Python, Java, C++

Frontend

React, Next.js, Tailwind CSS, ECharts, Canvas, responsive dashboard UI

Backend & Data

Node.js, Express, Spring Boot, REST APIs, Socket.io, Prisma, MySQL, SQLite

Agent & Platform

MCP, agent workflows, tool orchestration, human review, scoped access, audit trails

Delivery

Git/GitHub, Docker, Docker Compose, Linux, offline deployment, Cursor, Claude Code

EDUCATION

Nanjing University of Information Science & Technology

Computer Science and Technology
Graduated June 2025 · Nanjing, China

LANGUAGES

Mandarin Chinese — Native
English — CET-4

AVAILABILITY

Remote · Contract, part-time, or full-time

LIVE WORK

AgentOps Desk ↗

FleetLens ↗

Portfolio case studies ↗

Client names are withheld for confidentiality. Project scope, technology, delivery status, and dates are retained.

EXPERIENCE

Independent Full-Stack Developer

Nov 2025 — Present

Contract delivery · Remote and on-site collaboration

Delivered production systems for education and public-service environments. Worked directly from client requirements, owned implementation across frontend, backend, data, IoT integration, and deployment, and resolved issues through final handoff.

PROJECT EXPERIENCE

AgentOps Desk

Live · Source

Built a unified MCP gateway and operator console for large tool catalogs. Four discovery and execution meta-tools reduce agent context overhead; scoped API keys, rate limits, expiry and IP controls, policy-aware responses, human review, and complete audit records make execution inspectable.

FleetLens MCP Analytics

Live · Source

Built an MCP server and React renderer that turn business questions and operating data into governed datasets and responsive dashboards. Supports filters, multiple chart types, presentation controls, shareable views, seeded demos, and static deployment.

Smart Elderly Care Service Platform

Project Lead · Apr 2026 — Present

Owns an offline IoT operations display for a district retirement facility: C++ and Spring Boot services, 10+ device types through Node-RED, HTTP, Netty TCP, and Kafka, Docker Compose deployment on an isolated Windows server, and MySQL-to-Dameng database migration.

College Vehicle Dispatch System

Frontend Developer · Nov 2025 — Jan 2026

Delivered the React frontend for 10+ operational modules and 39 feature points, including a real-time ECharts/Canvas driving cockpit, RBAC administration, vehicle dispatch and approval workflows, maintenance management, and third-party monitoring, access-control, and parking data.

Discord Full-Campus Real-Time Platform

Graduation Project

Built a Next.js 15 communications platform with Socket.io messaging and polling fallback, LiveKit 1:1 and group audio/video, Prisma/MySQL relational data, TanStack Query pagination, UploadThing attachments, and Clerk authentication.

Additional Delivered Contract Projects

Completed

Delivered a cross-border e-commerce website, an English-vocabulary WeChat mini program, a Python/Scrapy data-crawling project, and Unity mini-game development work.
