SUMMARY

Full-stack engineer shipping AI-assisted automation, agent operations, and data products from backend services to operator-facing interfaces. Delivered client systems spanning 10+ IoT device types and 39 feature points, plus public MCP projects with live, credential-free demos.

EXPERIENCE

Independent Full-Stack Developer
Nov 2025 – Present

Contract delivery · Remote and on-site collaboration

GINOCN Cross-Border E-commerce · AI + WordPress Automation — ginocn.com

- Built and customized a production WordPress storefront and developed AI-assisted plugins to automate selected business workflows
- Created a human-in-the-loop page recreation pipeline: a vision model extracts reference structure and styles, prompts and frontend code iterate, and manual review gates release
- Automated build, test, and deployment on push with GitHub CI/CD; standardized reusable components and deployment steps for repeatable multi-site delivery

Smart Elderly Care Service Platform · Project Lead — Apr 2026 – Present

- Lead delivery of an offline operations display for a district retirement facility, integrating 10+ IoT device types through Node-RED, HTTP, Netty TCP, and Kafka across C++ and Spring Boot services
- Packaged the isolated Windows Server deployment with Docker Compose and migrated operational data from MySQL to Dameng

College Vehicle Dispatch System · Frontend Developer — Nov 2025 – Jan 2026

- Delivered the React frontend for 10+ operational modules and 39 feature points, including an ECharts and Canvas driving cockpit, RBAC, dispatch and approval, maintenance, and third-party data integrations

SELECTED PROJECTS

AgentOps Desk · MCP Gateway & Operations Console — Live · Source

- Built a Python, Starlette, and SQLite gateway that reduces 300+ possible tool schemas to 4 MCP meta-tools loaded in agent context, with on-demand discovery and execution
- Enforced scoped API keys, per-tool and per-account rate limits, expiry and IP controls; recorded every request, response, caller, and duration for human review

FleetLens · MCP Analytics Dashboard — Live · Source

- Built a TypeScript MCP server, React renderer, and CLI that turn CSV/JSON data and natural-language requests into governed dashboards across 5 chart types
- Added global filters, data snapshots, REST/SSE updates, presentation controls, shareable views, and a credential-free seeded demo of the complete workflow

Discord Full-Campus Real-Time Platform — Graduation Project

- Built a Next.js 15 platform with Socket.io messaging and polling fallback, LiveKit one-to-one and group calls, paginated Prisma/MySQL queries, file attachments, and Clerk authentication

EDUCATION

Nanjing University of Information Science & Technology
June 2025

B.Eng. in Computer Science and Technology

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, Java, C++
Web & Data	React, Next.js, Node.js, Express, Spring Boot, WordPress, REST APIs, Socket.io, Prisma, MySQL, SQLite
AI & Platform	MCP, agent workflows, vision-model workflows, human review, RBAC, GitHub CI/CD, Docker, Linux, Kafka
Spoken	Mandarin Chinese (native), English (CET-4)
